

RAZOR ONION TOPPER

The most product-friendly topper on the market

Designed for efficient and precise topping of onions with minimal damage and a constant flow in the processing line.

Thanks to its unique design, the Razor can top onions accurately at high capacity. This allows the topping machine to fit perfectly into the Tolsma-Grisnich line of onion processing machines, from receiving, cleaning, and storage to (optical) sorting.

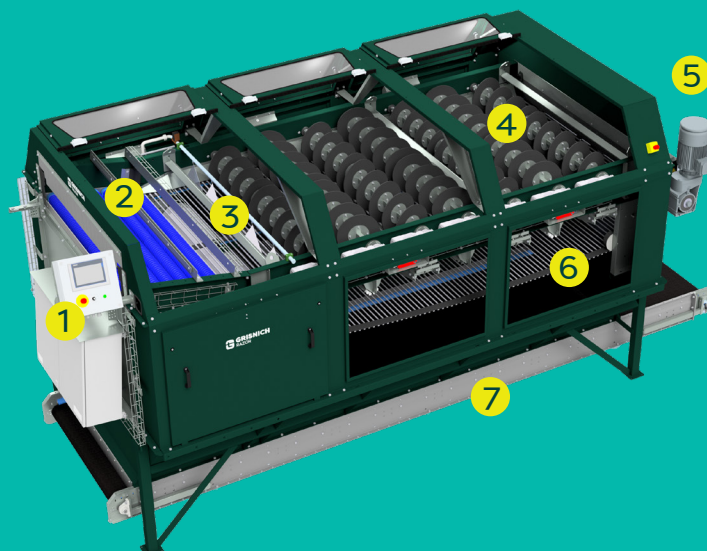

Through reduced product damage, high capacity, and minimal downtime, the Razor helps increase operational profitability.

What are the unique benefits of the onion topper?

- ✓ Minimal damage to onions at high capacity
- ✓ Permanent cleaning of the sieve web
- ✓ Clean and consistent topping result
- ✓ Speed of sieve web and distribution discs adjustable

- 1 Control screen
- 2 Spiral rollers
- 3 Spray tube – brushes
- 4 Distribution discs
- 5 Output conveyor (optional)
- 6 Sieve web with knives
- 7 Debris conveyor

Unique design

The Razor onion topping machine is specially designed for efficiently topping onions without damage. Unique to this onion topper is its higher capacity and better flow compared to other machines on the market. An optimal topping result is achieved through a unique method of turning the onions. This ensures that the onions are topped without damage.

Efficient topping

The product is fed via a spiral roller de-soiler, which ensures good distribution across the sieve web. Due to the continuous cleaning of the sieve web, the machine is very efficient to use. Changing sieves is not necessary, meaning the processing line rarely stops and the topping result remains consistent.

Ease of use and maintenance

The rotation speed of the sieve web and distribution discs can be easily controlled via a touchscreen. The machine is easily accessible for changing the knives via a quick-change system. Due to the unique construction of the topping machine, the lifespan is longer and the maintenance time required is shorter.

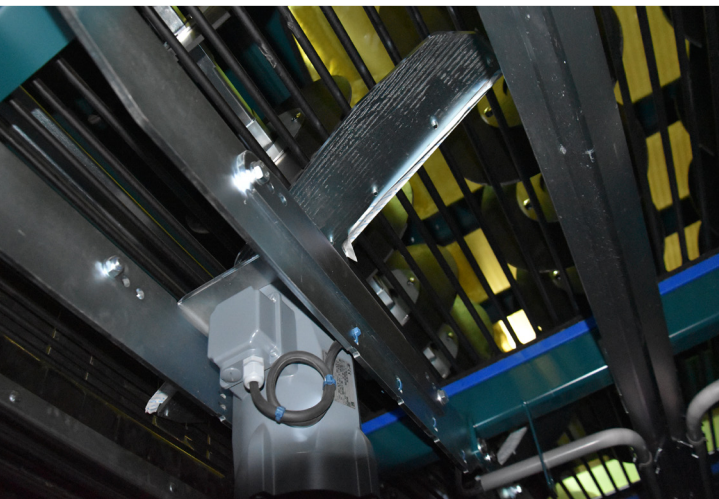

Suitable for every situation

The Razor is available in four capacities. As a result, a suitable version is available for every processing line: from compact machine to high capacity.

	14 D	8 D	7 S	4 S
Maximum capacity* (t/h)	50	28	25	14
Working width (mm)	1.800	1.800	870	870
Number of knives	14	8	7	4
Number of rows	2	2	1	1

* Maximum capacity depends on variety and conditions
